#### 1. GENERAL INFORMATION

#### 1.1 Product Description for Equipment under Test

The EUT is a smart TV stick with internal WiFi function operating at 2412-2462MHz for IEEE 802.11 b/g/n(HT20). It's powered by DC 5V through Mini USB port. For more details features, please refer to User's Manual.

Manufacturer : DigiLink Software, Inc.

Address : 19 Goddard, Irvine, CA 92618

RF Operation Frequency: 2412-2462MHz for 802.11b/g/n(HT20)

Modulation : CCK, DQPSK, DBPSK for 802.11b

OFDM for 802.11g/n

Number of Channel : 11 for 802.11b/g/n(HT20)

Channel space : 5MHz

Date Rate : 802.11b:1~11Mbps, 802.11g:6~54Mbps

802.11n: 6.5~65Mbps

Antenna Type : PIFA Antenna

Antenna Gain : 1.2 dBi (declared by manufacturer)

Power Supply : DC 5V come from external adaptor

Model name : BiggiFi

Note: : This report was an additional report based on

original report NTC1303330F. Both of them are the same except for this report updates model number,

product name and applicant.

# **Channel List**

802.11 b/g/n(HT20)					
Channel	Frequency MHz				
1	2412				
2	2417				
3	2422				
4	2427				
5	2432				
6	2437				
7	2442				
8	2447				
9	2452				
10	2457				
11	2462				

**Note:** According to section 15.31(m), regards to the operating frequency range over 10MHz, the Lowest, middle, and the Highest frequency of channel were selected to perform the test. The selected frequency see below:

802.11b/g/n(HT20)				
Channel	Frequency MHz			
1	2412			
6	2437			
11	2462			

#### 1.2 Related Submittal(s) / Grant (s)

This submittal(s) (test report) is intended for FCC ID: 2ABAE-BIGGIFI-001 filing to comply with Section 15.247 of the FCC Part 15, Subpart C Rule.

## 1.3 Test Methodology

AC mains line-conducted, antenna port conducted and radiated emission measurements were performed according to the procedures in ANSI C63.4 (2003) and KDB558074(v02). Radiated emission measurement was performed in semi-anechoic chamber and conducted emission measurement was performed in shield room. For radiated emission measurement, preliminary scans were performed in the semi-anechoic chamber only to determine the worst case modes. All radiated tests were performed at an antenna to EUT distance of 3 meters. All other measurements were made in accordance with the procedures in 47 CFR part 2.

#### 1.4 Equipment Modifications

Not available for this EUT intended for grant.

## 1.5 Support Device

LED TV : Manufacturer: Express Luck Industrial Ltd.

M/N: LE-2210

Switching Adapter : M/N: JY-05100

(Provid by manufacturer) Input: AC 100-240V 50/60Hz 0.3A

Output: 5V 1000mA

# 1.6 Test Facility and Location

Listed by FCC, August 02, 2011 The Certificate Registration Number is 665078.

Listed by Industry Canada, July 01, 2011 The Certificate Registration Number is 46405-9743.

Dongguan NTC Co., Ltd.

Building D, Gaosheng Science and Technology Park, Hongtu Road, Nancheng District, Dongguan City, Guangdong Province, China

## 1.7 Summary of Test Results

FCC Rules	Description Of Test	Result
§15.207 (a)	AC Power Conducted Emission	Compliance
§15.247(b)(3)	Max. Conducted Output Power	Compliance
§15.247(a)(2)	6dB Bandwidth	Compliance
§15.247(e)	Power Spectral Density	Compliance
§15.247(d)	Band Edge and Conducted Spurious Emissions	Compliance
§15.247(d),§15.209, §15.205	Radiated Spurious Emissions and Restricted Bands	Compliance
§15.203	Antenna Requirement	Compliance

# 2. System Test Configuration

# 2.1 EUT Configuration

The EUT configuration for testing is installed on RF field strength measurement to meet the Commissions requirement and operating in a manner which intends to maximize its emission characteristics in a continuous normal application.

#### 2.2 Special Accessories

Not available for this EUT intended for grant.

## 2.3 Description of test modes

The EUT has been tested under continuous operating condition. Test program used to control the EUT staying in continuous transmitting mode. The Lowest, middle and highest channel were chosen for testing, and modulation type CCK, DQPSK, DBPSK, OFDM and all data rate were tested, but only the worst case data is shown in this report.

#### 2.4 EUT Exercise

The EUT was operated in the engineering mode to fix the Tx frequency that was for the purpose of the measurements.

#### 3. Conducted Emissions Test

#### 3.1 Test SET-UP (Block Diagram of Configuration)

#### 3.2 Test Condition

Test Requirement: FCC Part 15.207

Frequency Range: 150KHz ~ 30MHz

**Detector: RBW 9KHz, VBW 30KHz** 

**Operation Mode: TX** 

#### 3.3 Measurement Results

Please refer to following the worst case (802.11b) plots.

# 4. Max. Conducted Output Power

#### 4.1 Measurement Procedure

Maximum Conducted Output power at Antenna Terminals, FCC Rules 15.247(b)(3):

The antenna port of the EUT was connected to the input of a spectrum analyzer. The analyzer was set according to the FCC KDB 558074(v02) spectrum analyzer's integrated band power measurement function with band limits set equal to the EBW band edges and power was read directly in dBm. External attenuation and cable loss were compensated from the measured value.

#### 5. 6dB Bandwidth

#### **5.1 Measurement Procedure**

DTS 6dB Channel Bandwidth, FCC Rule 15.247(a)(2):

The antenna port of the EUT was connected to the input of a spectrum analyzer. Analyzer RES BW was set to 1-5 % of the emission bandwidth(not to exceed 100KHz) according to FCC KDB 558074(v02). For each RF output channel investigated, the spectrum analyzer center frequency was set to the channel carrier. A PEAK output reading was taken, a DISPLAY line was drawn 6 dB lower than PEAK level. The 6dB bandwidth was determined from where the channel output spectrum intersected the display line

# 6. Power Spectral Density

#### **6.1 Measurement Procedure**

DTS 6dB Channel Bandwidth, FCC Rule 15.247(a)(2):

The antenna port of the EUT was connected to the input of a spectrum analyzer. Analyzer was set as below according to FCC KDB558074(v02):

- 1. Set analyzer center frequency to DTS channel center frequency.
- 2. Set the span to 1.5 times the DTS channel bandwidth.
- 3. Set the RBW  $\geq$  3 kHz.
- 4. Set the VBW  $\geq$  3 x RBW.
- 5. Detector = peak.
- 6. Sweep time = auto couple.
- 7. Trace mode = max hold.
- 8. Allow trace to fully stabilize.
- 9. Use the peak marker function to determine the maximum amplitude level.
- 10. If measured value exceeds limit, reduce RBW (no less than 3 kHz) and repeat.

### 7. Band Edge and Conducted Spurious Emissions

#### 7.1 Requirement and Measurement Procedure

In any 100KHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20dB below that in the 100KHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement.

The antenna port of the EUT was connected to the input of a spectrum analyzer. Analyzer was set as below according to FCC KDB558074(v02):

- 1. Set start frequency to DTS channel edge frequency.
- 2. Set stop frequency so as to encompass the spectrum to be examined.
- 3. Set RBW = 100 kHz.
- 4. Set VBW  $\geq$  300 kHz.
- 5. Detector = peak.
- 6. Trace Mode = max hold.
- 7. Sweep = auto couple.
- 8. Allow the trace to stabilize (this may take some time, depending on the extent of the span).
- 9. Use peak marker function to determine maximum amplitude of all unwanted emissions within any 100 kHz bandwidth.

#### 7.2 Test SET-UP (Block Diagram of Configuration)

#### 7.3 Measurement Results

The test plots showed all spurious emission and up to the tenth harmonic was measured and they were found to be at least 20dB below the highest level of the desired power in the passband. Please refer to below plots.

## 8. Radiated Spurious Emissions and Restricted Bands

### 8.1 Test SET-UP (Block Diagram of Configuration)

### 8.1.1 Radiated Emission Test Set-Up, Frequency Below 30MHz

#### 8.1.2 Radiated Emission Test Set-Up, Frequency above 1GHz

#### 8.2 Measurement Procedure

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi- anechoic chamber room. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The height of antenna is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading. The test-receiver system was set to peak detect function and specified bandwidth with maximum hold mode.

#### 8.3 Limit

Frequency range	Distance Meters	Field Strengths Limt (15.209)
MHz		μV/m
0.009 ~ 0.490	300	2400/F(kHz)
0.490 ~ 1.705	30	24000/F(kHz)
1.705 ~ 30	30	30
30 ~ 88	3	100
88 ~ 216	3	150
216 ~ 960	3	200
Above 960	3	500

Remark : (1) Emission level (dB) $\mu$ V = 20 log Emission level  $\mu$ V/m

- (2) The smaller limit shall apply at the cross point between two frequency bands.
- (3) As shown in 15.35(b), for frequencies above 1000MHz, the field strength limits are based on average detector, however, the peak field strength of any emission shall not exceed the maximum permitted average limits, specified above by more than 20dB under any condition of modulation.
- (4) The frequency range scanned is from the lowest radio frequency signal generated in the device which is greater than 9 kHz to the tenth harmonic of the highest fundamental frequency or 40 GHz, whichever is lower.
- (5) §15.247(d) specifies that emissions which fall in the restricted bands, as defined in §15.205 comply with radiated emission limits specified in §15.209.

### 9. Antenna Application

#### 9.1 Antenna requirement

According to of FCC part 15C section 15.203 and 15.240:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

Systems operating in the 2400-2483.5MHz band that are used exclusively for fixed, point-to-point operations may employ transmitting antennas with directional gain greater than 6dBi provided the maximum peak output power of the intentional radiator is reduced by 1dB for every 3dB that the directional gain of the antenna exceeds 6dBi.

#### 9.2 Measurement Results

The antenna is PIFA antenna that no antenna other than that furnished by the responsible party shall be used with the device, and the best case gain of the antenna is 1.2 dBi. So, the antenna is consider meet the requirement.
